- **No tongue coating**
- **No impairment of taste**
- **Can be used indefinitely**
- **No damage to the oral flora**
- **Reduction of bad breath and wound swelling**
- **Removal of plaque on tongues and teeth**

How it works -Veriforte® med oral mouthwash:

The Veriforte® med oral mouthwash washes around single-cell microorganisms. In this case engages the hypochlorous acid to the cell wall of the microorganisms and increases its permeability . The hypotonic Veriforte™ med solution ensures that more water flows into the cells to compensate for the osmotic gradient.

Osmolysis occurs: the increasing internal pressure causes the cells to burst .

The Veriforte® med oral mouth rinse solution is made up of: Water, NaCl, NaOCl and HOCl , stabilized by a unique process.
